

NATIONAL NUTRITION MONITORING BUREAU

R e p o r t
for the year 1975

**NATIONAL INSTITUTE OF NUTRITION
Indian Council of Medical Research**

Hyderabad-500007.

1976

The aims and objectives of the National Nutrition Monitoring Bureau, which was set up by the Indian Council of Radical Research in June 1972, have already been reported (Plan of Operation -- NNMB). Data on food consumption and nutritional status of representative sections of population from nine regional units have been collected. The cumulative coverage of households for dietary surveys and individuals for assessment of nutritional status until the end of December 1975 is presented in Table I. Results of the analysis of the data received till the end of the year 1974 from different regional units with respect to rural households have been reported (NNMB Report 1975). One of the drawbacks of the results reported earlier (Interim NNMB Report 1974 and NNMB Report 1975) was the lack of coverage of districts from comparable 'developmental category¹ (as per the criteria given in the plan of operation of NNMB) in various States; also the households were covered in different seasons in different States. These precluded inter-state comparisons despite strictly standardised methodology adopted in data collection. Surveys conducted during the year 1975 were designed to overcome these limitations.

In keeping with the decision taken at the last NNMB meeting (1975) this year's report, in addition to providing state-wise information, includes district-wise details of daily average food and nutrient consumption figures of households classified in different income groups (Annexure I). This is mainly intended for the use of the regional units and no attempt has been made to interpret the results of district data at this stage of analysis.

COVERAGE:

During the period under report a total of 3978 households have been covered for dietary surveys, 2967 (74%) from rural areas and the remaining from urban localities in nine States (Table 2). Because of the inadequate coverage of the households in Tamil Nadu and in Madhya Pradesh, these were excluded from the analysis. The results presented here, thus pertain to 2672 rural households covered for diet and nutritional surveys in the States of Kerala (410), Karnataka (410), Andhra Pradesh (385), Maharashtra (405), Gujarat (385), West Bengal (312) and Uttar Pradesh (365). In each State four districts, one from each of the socio-economic category (NNMB Plan of Operation) have been covered. The names of the districts are provided in the Table 3,

INCOME STATUS

The distribution of households according to daily per capita income showed that a majority (73.8%) had an income of less than two rupees per day while 20.9% had an income of Rs.2-5, only a small per cent of households (5.3%) had a daily income of Rs.5/- or more per person (Table 4).

PATTERN OF FOOD AND NUTRIENT INTAKE

In annexure I is presented the average intake of foodstuffs and nutrients per consumption unit per day based on family diet surveys. Tables on pages 1 to 63 of the annexure provide district-wise and state-wise data on food and nutrient consumption of population classified according to different income groups, and they exhibit definite income trends. However, the comments made in

the following paragraphs in respect of States are based on the pooled data (Tables on page 64, 65 and 66 of Annexure I).

FOODSTUFFS

CEREALS AND MILLETS

Maximum consumption of cereals and millets was observed in the State of Karnataka (696 g). This is followed by Andhra Pradesh (571), Uttar Pradesh (560), west Bengal (534), Maharashtra (495), Gujarat (480) and Kerala (388). These observations are similar to those reported earlier (NNMB Report 1975), Pulses, leafy vegetables, other vegetables, roots and tubers, flesh food9, milk and milk products, fats and oils and sugar and Jaggery are also of the pattern reported in the NNMB Report 1975.

NUTRIENTS

The average nutrient intake per consumption unit per day, based on family dietary survey data, are presented in the table on page 65 of Annexure I.

PROTEIN

The average daily intake of protein per consumption unit was found to be well above the recommended (ICMR, 1968) levels of 55 g in all the States except in Kerala, which showed an intake of about 45 g.

CALORIES

The average intake of calories per CU per day ranged from 1926 in Kerala to 2911 in Karnataka. Excluding the States of

Andhra Pradesh and Karnataka, which met their calorie requirements, the calorie deficit of less than 10% was observed in the States of Maharashtra, Gujarat, west Bengal and Uttar Pradesh. However, a maximum deficit of 20% was observed in the State of Kerala.

MINERALS

CALCIUM

The intake of calcium was highest (918 mg) in Karnataka and lowest (361 mg) in Uttar Pradesh. In all the other States, the average consumption of this nutrient ranged from about 400 to 650 mg, a level recommended by the Expert Group (ICMR 1968).

IRON

The intake of iron Was lowest in Kerala (20.9 mg) and highest in Karnataka (47.4 mg). In the other States, the average daily intake was around recommended level of 30 mg per CU.

VITAMINS

RETINOL (VITAMIN A)

In all the States the intake levels of Vitamin A were far below the recommended value of 750 µg. The highest values were observed in west Bengal (508 µg) and lowest in Kerala (117 µg).

THIAMINE (VITAMIN B₁)

Intakes of Vitamin B₁. ranged from 0.88 mg in Kerala to 2.55 in Karnataka.

RIBOFLAVIN (VITAMIN B₂)

The highest (1.22 mg) intake of this vitamin was seen in Gujarat followed by Karnataka (1.19 mg), Uttar Pradesh (1.08 mg), Maharashtra (1.03 mg), west Bengal (0.81 mg), Andhra Pradesh (0.77 mg) and Kerala (0.75 mg).

The intakes of Vitamin B₁ were found to be satisfactory in all the States except Kerala; while the intakes of Vitamin B₂ were found to be below the recommended levels in all the States.

PROTEIN CALORIE MALNUTRITION

To determine the adequacy or otherwise of intakes of protein and calories the following procedure was adopted. Intakes in any household wherein the values for proteins and calories fell below the mean -2SE of the recommended allowances, were considered as inadequate. All households were thus classified into different categories of protein-calorie adequacy and inadequacy.

The percentage distribution of the households according to protein-calorie adequacy is shown in table on page 66 of the Annexure I.

CALORIE AND PROTEIN ADEQUACY

The proportion of households having adequate intake of calories and proteins ranged from 32% in Kerala to 80% in Karnataka. Nearly 50% of the households in the States of Maharashtra, Gujarat, west Bengal and Uttar Pradesh had adequate protein and calorie intakes. In Andhra Pradesh about 60% of the households belonged to this category.

As reported last year, protein inadequacy was invariably associated with calorie inadequacy except in a small per cent of households (Kerala 3.7%, Karnataka and Gujarat 0.3%, West Bengal 1.6%), Where the calorie adequacy Was associated with protein inadequacy. A large proportion of the households was found to be calorie deficient as compared to protein in all the States, signifying the problem of calorie inadequacy being relatively of greater magnitude than that of protein.

NUTRITIONAL STATUS -- CLINICAL

A total of 16032 subjects Were examined for the presence of nutritional deficiency signs; in addition their body measurements were taken. Of these 536 (3.3%) Were infants (below one year), 2046 (12.8%) Were preschool children (1-5 years), 3499 (21.8%) Were of school going age and 3829 (23.9%) belonged to the age group of 12-21 years. The rest 38.2% Were adults. The unit-wise per cent prevalence of various nutritional deficiency signs in each of these age groups is presented in Annexure II.

Most commonly observed nutritional disorders are: Protein-calorie malnutrition (PCM); Vitamin A and B-complex deficiency and deficiency of essential fatty acids. The signs of PCM Were seen more frequently in infants and preschool children, While those of vitamin deficiencies in children of school age and adolescents.

PROTEIN-CALORIE MALNUTRITION

Clinical cases of marasmus/emaciation and kwashiorkor (oedema) Were seen in almost all the States. Prevalence of marasmus or

emaciation was common in children under one year of age, while in preschool children both types of PCM, namely Maresmus and kwashior-kor were seen; their per cent prevalence ranged from 0.2 to 1.4.

VITAMIN AND OTHER DEFICIENCY SIGNS

Per cent prevalence of ocular signs like xerosis and Bitot's spot suggestive of vitamin A deficiency among children ranged from 0.8 to 7.0, while per cent prevalence of oral and lingual lesions of B-complex deficiency such as angular stomatitis, cheilosis, glossitis, etc. ranged from 0.7 to 18.3.

Vitamin A and B-complex deficiency signs were seen in almost all the States.

Prevalence of phrynodermia was observed in almost all the States. The peak prevalence of 9.4% of this deficiency sign was seen in Kerala among children between the ages of 5-12 years.

Varying degree of dental mottling and caries were observed in different States.

THYROID ENLARGEMENT

Enlargement of thyroid gland was observed in the States of Kerala (0.5%), Maharashtra (0.4%), West Bengal (0.4%) and Uttar Pradesh (12.9%).

NUTRITIONAL STATUS -- ANTHROPOMETRY

GROWTH PATTERN

Means and standard deviation of anthropometric measurements-- height, weight, arm circumference and skin fold at triceps by age

and sex are presented in Annexure III. In general, the values for various measurements were lower for females except skin fold values which tended to be higher during adolescent period.

PREVALENCE OF UNDERNUTRITION IN PRESCHOOL CHILDREN USING ANTHROPOMETRY

WEIGHT FOR AGE :

When weight for age was used as criterion for quantifying malnutrition (Gomez's classification) it was observed that about 16 to 30% children manifested weight deficit of 40% in different States. The highest prevalence of severe forms of undernutrition was seen in Maharashtra (29.8%), while the lowest (16%) was observed in West Bengal. Nearly two-thirds of the children suffered from either mild or moderate degrees of undernutrition in various States.

TABLE I

NNMB - COVERAGE OF POPULATION
(Till the end of December 1975)

NNMB — PERCENTAGE DISTRIBUTION OF PRESCHOOL CHILDREN (1-5 YEARS) ACCORDING TO WEIGHT FOR AGE CLASSIFICATION* IN DIFFERENT STATES:

States	No. of children	Normal	Mild	Moderate	Severe
Kerala	128	7.0	25.0	50.8	17.2
Karnataka	343	3.5	20.1	54.2	22.2
Andhra Pradesh	246	2.4	19.5	54.9	23.2
Maharashtra	248	1.2	16.2	52.8	29.8
Gujarat	236	0.8	22.9	56.4	19.9
West Bengal	267	3.3	29.6	50.1	16.0
Uttar Pradesh	253	7.1	22.9	47.9	22.1

* % of American

Grade:

standard:

≥90	=	Normal
75-90	=	Mild
60-75	=	Moderate
< 60	=	Severe

N.N.M.B.: PERCENT DISTRIBUTION OF INDIVIDUALS ACCORDING TO
PROTEIN-CALORIE INADEQUACY

<u>STATE</u>	No. of indivi- duals	PI CI	PI CA	PI CI	PA CA	PI	CI
	surve- yed						
KERALA	311	19.0	2.2	41.8	37.0	21.2	60.8
KARNATAKA	441	2.5	---	13.2	84.3	2.5	15.7
ANDHRA PRADESH	339	15.9	0.6	35.4	48.1	16.5	51.3
MAHARASHTRA	443	8.1	0.2	34.3	57.4	8.3	42,4
GUJARAT	311	6.4	0.6	32.5	60.5	7.0	38.0
WEST BENGAL	366	16.1	1.1	40.2	42.6	17.2	56.3
UTTAR PRADESH	412	12.9	----	33.7	53.4	12.9	46.6

PI = Protein Inadequacy
 CI = Calorie Inadequacy

PA = Protein Adequacy
 CA = Calorie Adequacy
